CABLE AND CIRCUIT ASSEMBLY

Diploma of Vocational Studies (DVS)
945 hours

The assembler of cables and electric circuits

What does he do?

The cable assembler manufactures, installs, connects, and verifies, and they ensure quality control of wires and electric cables for aircraft. They then verify the continuity of the electric harness and correct problems detected.

Examples: Landing light flight instruments, radio systems and engine instrument displays.

What are his main duties?

He manufactures and installs the electrical harnesses using assembly drawings, technical procedures and tools.

This job is for you if...

- you like methodical work, teamwork and precision
- you have a sense of responsibility, observation and analysis.
- you have excellent visual acuity (not recommended for colorblind people)

Prerequisites

- hold a high school diploma (DES)
or
- be at least 16 years old and have successfully completed Secondary 4 in French, in English and in Mathematics or have recognition of equivalent learning.

Workplace potential

- companies specializing in cabling, telecommunications and automation
- aircraft manufacturers and flight simulators

Average salary between \$12 and \$24/hour
